YOUR WHEEL PARTNER

## ALCAR GREEN DEAL

„We aim to identify potentials, act with foresight  
and continuously achieve improvements.“

The ALCAR Group is committed to making a positive contribution to the environment by implementing sustainable practices. The ALCAR Green Deal is our strategic framework aimed at assuming ecological responsibility and making our business processes, products, and services more environmentally friendly. This Green Deal encompasses several key areas: production, supply chain, products, and social engagement.

We are committed in our actions and conduct to the responsible use of resources, the environment, and the interests of our employees, customers, neighbours, suppliers, and society. Adhering to our binding obligations is a given for us.

Our goal is to minimize negative impacts on people and the environment and to avoid waste. We achieve this through:

- sustainable investments,
- clean and energy-efficient processes,
- ongoing monitoring, and
- continuous improvements.

In 2024, we were able to increase the share of electricity consumption from renewable sources to 53 percent (compared to 45 percent in the base year 2023). By 2030, we have set ourselves the goal of continuously increasing this share to 65 percent in order to further reduce CO<sub>2</sub> emissions from fossil fuels.

To promote outstanding environmental performance and integrate it into all processing processes, we adhere to the following principles:

1. **Production Practices:** ALCAR focuses on the development, improvement, and application of environmentally friendly production methods that are not only efficient but also eco-friendly. This includes minimizing waste and emissions in our manufacturing processes.
2. **Materials and Recycling:** ALCAR places great emphasis on the development and manufacture of eco-friendly products, focusing on their use and subsequent recycling. We ensure that the wheels produced can be recycled at the end of their lifecycle to reduce environmental impact.
3. **Energy Efficiency:** ALCAR invests in energy-efficient production facilities and processes. Our production sites are designed to optimize energy consumption, thereby reducing the carbon footprint of our manufacturing activities.

4. **Corporate Policy and Regulatory Compliance:** ALCAR adheres to stringent environmental laws and regulations, as well as industry standards in all regions where we operate. We implement comprehensive environmental management systems to ensure continuous improvement of our environmental performance.
5. **Logistics and Distribution:** Our logistics are designed to minimize environmental impact by utilizing efficient distribution networks and reducing transport emissions. Our extensive presence in 16 European countries enables local distribution, further reducing transport-related emissions.
6. **Protected Areas:** We respect protected areas and actively manage the negative impacts on biodiversity and ecosystem services in accordance with good international industry practices.
7. **Sustainable Procurement:** ALCAR works closely with its suppliers to achieve sustainability goals. We prefer suppliers who adhere to high environmental standards and actively work to reduce their ecological footprint. We conduct audits and reviews of suppliers' environmental practices to ensure they meet ALCAR's standards and requirements.

The ALCAR Green Deal is our commitment to actively contribute to a more sustainable future. By consistently implementing our environmental strategy, we aim not only to achieve our ecological goals but also to demonstrate to our customers, partners, and society that sustainable actions and economic success can go hand in hand. We are determined to do our part in preserving our planet and look forward to the challenges and opportunities ahead.
